SKYNET HF - HANGAR & FLIGHTLINE

SKYNET HF is a physical last line of defense system that obscures and protects high value aircraft and personnel against intrusion from small unmanned aerial systems (sUAS). Additional benefits include Foreign Object Damage (FOD) risk mitigation and bird prevention.

PROBLEM STATEMENT

The evolving nature of warfare increasingly involves the use of sUAS and commercially available drones, which have become accessible and versatile tools for adversaries. These technologies pose significant threats due to their capability to conduct surveillance, deliver payloads, and disrupt operations at a low cost. As these threats continue to grow, it is imperative that military forces adapt through rigorous training and preparation.

DESIGN ›› MANUFACTER ›› INSTALL

- *ROGUE UAS Spec Netting (Available upon request)*
  - *High heat capacity*
  - *UV resistant*
  - *Moisture resistant*
  - *High tensile strength*
  - *Customizable netting pattern (ex. 3" squares)*
  - *Enduring; 15 year Warranty*
- *Modular & scalable dimensions*
  - *Integrate with any style hangar or sunshade*
  - *Retracable/stowable for aircraft ingress/egress*
- *Engineered to site specific requirements*
  - *Wind Code compliance*
  - *Recessed anchors in concrete for tie down*
  - *Tensioned for rigidity and aircraft safety*
